

Suzuki Hayabusa 1300 Dual Bolton Series

Suzuki Hayabusa 1300 Dual Bolton Series Exhaust: Die Ultimative Bolton Anlage: De- signed um leicht angebaut zu werden und maximalen Power und Sound zu haben. Bei gleichzeitig geringem Gewicht. In oval oder rund in alu oder carbon.

The ultimate Bolton exhaust: Dual Bolton for the Suzuki Hayabusa. Race-developed, world-renowned pipe is built with the highest quality materials and craftsmanship and will greatly enhance your bike's performance, looks and sound. This exhaust is avail- able in round or oval in aluminum or carbon.

SUZUKI GSX-R 1300 Hayabusa Cobra Bolt-on line

The Cobra bolt-on system for the SUZUKI HAYABUSA gives this already radical high-performance motorcycle even more power and torque. More power, less weight and a sound which calls attention to the high performance of the bike make for a perfect package.

GOAL
The Cobra development department's goal in developing this bolt-on system was to increase power and torque without disturbing the smoothness of the power curve. So much brute force had to be made fun to use. We managed to develop an exhaust system which provides an even smoother power curve than stock and at the same time increases maximum power by 2.25 kW (3.06 HP). Torque is increased by 6 Nm between 4700 and 7000 rpm.

LOOK
The Cobra bolt-on system is a finely crafted product. It was developed by a team of people who have been developing exhaust systems for over 20 years. This product also received our maximum attention. Our goal is for all of our customers to receive a product which exceeds the state-of-the-art and sets new standards for development, production technology and materials. Highly skilled hand production together with the most advanced technology are reflected in a product which knows no compromise.

Attention was paid to every detail in the production of the bolt-on system for the SUZUKI HAYABUSA. It is made from the finest materials: the front rosettes are made on a CNC machine from billet aircraft aluminum, the muffler clamps are stainless, the muffler caps and perforated inner sleeves are stainless steel, while the oval-section outer sleeves are available in either carbon-fiber or hi tec aluminum (the choice does not affect overall engine performance).

Das Cobra Bolton System für die Hayabusa erreicht die höchste Qualitätstufe in Produktion und Technik. Jedem Detail wird höchste Aufmerksamkeit gewidmet. Technologische Hochleistungsfertigung und sorgfältige Handwerksarbeit ergeben eine erstklassige Schweißarbeit und gewährleisten ein Höchstmaß an Qualität im fertigen Produkt. Das Resultat von über 20 Jahren Fertigungstechnik im Sportauspuffanlagenbau.

Das Cobra Bolton System ist einzigartig. Das Mittel- oder Verbindungsrohr ist aus leichten, poliertem V2A plus, während die Schalldämpferhülle in superleichtigem Hi-Tec 7065T6 Alu oder in dem neuen und Ultraleichtem Carbon Ri Reinforced gebaut wird. (Die Leistung wird davon nicht beeinflusst.) Der komplette Slo Kit wird aus den gleichen Materialien gefertigt, die auch die professionellen Race Teams benutzen. Das netto Gewicht liegt bei: Titandämpfer ab 1,85kg, Alu-V2A ab 2,20 kg. Eine deutliche Gewichtsreduzierung gegenüber der Originalanlage.

Die Installation ist einfach und schnell zu handhaben, weil der Bolton Kit als Ersatz für die Originalanlage konzipiert worden ist. Kein Spezial Werkzeug ist notwendig.

Der im Vergleich sehr niedrige Preis ist ein wichtiges Argument neben den anderen Vorteilen, wie geringes Gewicht, hohe Qualität, verbesserte Optik und Design und vollen Powersound.

Das Cobra Logo garantiert ein Höchstmaß an Qualität. Sie können sicher sein ein absolut erstklassiges Produkt zu bekommen.

The Cobra Bolton system for the Hayabusa achieves the highest production quality. Every detail has received the same amount of attention. Technologically advanced production and top-quality hand welding are reflected in a superior and unique final product, the result of the experience we have gained in developing exhaust systems.

This product was also created in our development department by the same team which develops exhaust systems for the professional teams.

The Cobra Bolton system is unique. The oval/round-section muffler is available in either Carbon Ri Reinforced or aluminum (the choice of muffler does not affect the overall performance). The total weight of the slip-on system starts at 1,85 kg for the Titan muffler whereas the aluminum muffler weighs 2,20kg. The entire rear end of the slip-on system (muffler, clamp and tension springs) is made using the same materials and technology which we provide to the professional teams.

Installation of the Bolton system is simple and fast, as it is designed as a supplement to the original exhaust system. No special tools are needed.

For a reasonable price, the Cobra system offers increased power and torque, lighter weight and better looks. The Cobra logo with the Cobra on the muffler is a guarantee that you have chosen the finest product on the market.
