

Eagle Mach 7

The Eagle slip-on system for the SUZUKI GSXR1300 K8 achieves the highest production quality. Every detail has received the same amount of attention. Technologically advanced production and top-quality hand welding are reflected in a superior and unique final product, the result of the experience we have gained in developing exhaust systems. This product was also created in our development department by the same team which develops exhaust systems for the racing teams.

The Eagle slip-on system is unique. The link pipe is made of stainless steel, while the oval-section muffler is available in either carbon-fiber or aluminum (the choice of muffler does not affect the overall performance). The total weight of the slip-on system is 3.5 kg lighter than stock. The entire rear end of the slip-on system (muffler, clamp and tension springs) is made using the same materials and technology which we provide to the race teams.

Installation of the slip-on system is simple and fast, as it is designed as a supplement to the original exhaust system. No special tools are needed.

For a reasonable price, the Eagle slip-on system offers increased power and torque, lighter weight and better looks. The Eagle logo with the Eagle on the muffler is a guarantee that you have chosen the finest product on the market.

PERFORMANCE

Measurements of the Eagle SLIP-ON system on the SUZUKI GSX-R 1300 (without noise damper):

Power: the Eagle Slip-On works very well with the Suzuki engine. The power curve is linear, and from the added power from 4000 rpm on, it runs parallel to the stock curve with no drop-outs or fluctuations. Max. power of 183,24 HP is reached at 11700 rpm.

Torque: the torque curve reflects the same compatibility with the operation of the engine. The increase can be seen throughout the entire rpm range, so you get bags of torque to go along with the loads of power.
